INTRODUCTION

Format Integration has been a recurring topic of discussion regarding the USMARC bibliographic format since the separate format documents began appearing in the late 1960s and early 1970s. While coordination across forms of material, especially of core data elements, has always been a format development principle, the final step of establishing validity of all data elements for all forms required careful consideration. In the mid 1980s the work was finally undertaken. A USMARC format change proposal (88-1) for Format Integration was considered by the USMARC advisory group over a two year period, 1986-1988. The outcome of those discussions and the format in an integrated form are presented on the following pages. Each place where a change was made to the format during the integration process, the change has been highlighted and annotated.

This publication is intended to serve as an interim indication of the integrated format decisions to assist planning. It does not replace the published *USMARC Format for Bibliographic Data* and its updates as the authoritative version of USMARC. A few of the format changes approved with format integration (the deleted fields and subfields) are being published with *Update Number 1* (Winter 1988/89) to the *USMARC Format for Bibliographic Data*. The remainder of the changes will be published in *Update Number 2*, due in summer 1989.

On the following pages, Part I describes format integration and Part II shows its effects on the USMARC bibliographic format.. The Appendixes provide useful summaries of the format changes.

PART I: FORMAT INTEGRATION OVERVIEW

Definition

Format integration is the validation of data elements for all forms of material, thus removing the restrictions on data elements that currently make them valid only for specific forms of material. The result is a single bibliographic format that contains data elements that can be used to describe many forms of material. It also provides the means for describing the serial-related aspects of any of these items as well as any archival characteristics present, regardless of the medium or form of material.

Integrating the USMARC formats also inevitably requires addressing the inconsistencies, ambiguities, and redundancies that result when all fields, subfields, and indicators are extended across all forms of material.

Background of Format Integration

The possibility of having an "integrated" USMARC bibliographic format has been discussed with increasing frequency over the years, particularly as an outgrowth of the 1978-79 review work carried out because of the adoption of the *Anglo-American Cataloguing Rules*, 2nd edition (*AACR 2*), the consolidation of the bibliographic formats into one document in 1980, the MARC format review conducted by the Library of Congress in 1980-81, and the development of the USMARC statement of underlying principles in 1982-83.

In August 1983, specific proposals for achieving format integration were set forth in Discussion Paper No. 7, "Integration of USMARC Bibliographic Formats". General discussion of the topic took place at a 1983 meeting of the American Library Association RTSD/LITA/RASD Committee on Representation in Machine-Readable Form of Bibliographic Information (MARBI), and the Library of Congress meetings with the Networks. At the January 9, 1984, meeting of the USMARC advisory group, of which MARBI is the principal component, the question was again discussed and the following agreement resulted:

> In its discussions of format integration, MARBI has agreed upon the following definition of an integrated format: The USMARC bibliographic formats are considered a single integrated format. Content designation defined therein is valid in any record in which it is appropriate.
>
> In order to begin the process of format integration, MARBI has agreed to identify the inconsistencies among the various existing formats and to evaluate the advantages and disadvantages of eliminating these inconsistencies (including the impact of such changes on existing systems). Where the advantages predominate, the inconsistencies will be removed. Any inconsistencies that remain will be clearly labeled in the format documentation."

Following this meeting, in the spring of 1984, the Research Libraries Group (RLG) submitted several proposals to the Library of Congress concerning the seriality problem and other aspects of format integration. RLG's serials proposal recommended a new field for handling serials fixed field data as well as the validation of serials variable fields for all forms of material. The proposals were aimed at "eliminating inconsistencies among USMARC bibliographic formats on a field-by-field basis."

Impact Investigations

In September 1983, the Library of Congress Network Development and MARC Standards offices had already begun a systematic review of the USMARC bibliographic formats. Responding to these discussions of format integration and the recognized need to address the long-standing seriality problem, the Library of Congress incorporated these issues into this ongoing USMARC review process. Because staff at the Library of Congress felt that the ramifications of format integration might be more extensive and more costly than had been previously suggested, an extensive Library of Congress investigation was undertaken that brought together staff from many parts of the Library to consider the impact of format integration.

During the course of the investigation, it became clear that it would not be an easy task to assess realistically the costs and benefits of format integration, either to the Library of Congress or to those libraries using the USMARC bibliographic format and Library of Congress MARC products. This difficulty was, in part, because the actual (as opposed to theoretical) impact of format integration would very much depend on what was finally included under that umbrella concept and further, upon the actual implementation strategies chosen, both at a particular institution and at other institutions exchanging records with that institution.

In the fall of 1985 and in the spring of 1986, the Library of Congress sent a format integration document to select institutions (networks, system vendors, etc.). Those receiving the document were asked to investigate the impact of the document on their institution and to send their findings to the Library of Congress. Comments on several specific questions concerning seriality, full integration, and various techniques were also requested. In the fall of 1986, the replies were reviewed. The responses indicated that format integration was not without cost but was felt to be necessary by most, especially in the area of seriality. Format integration would be the foundation for a new view in development work, from which benefits would only come over time.

Discussion Paper and Proposal

A discussion paper (Discussion Paper 16: "Format Integration Considerations") was prepared in the spring of 1987 which dealt with the seriality issue and other facets of integration. In that discussion paper the format-related aspects of items described in USMARC bibliographic records were divided into two categories:

Control aspects:	serial control, archival control
Form aspects:	textual, map, music, visual materials, computer files

Seriality and archival control are two features that can apply to all material no matter what form that material takes--textual, film, map, etc. The discussion paper, prepared by the Library of Congress Network Development and MARC Standards Office, treated the issues in extending these two features to all forms of material, as well as full integration of form aspects.

The discussion paper indicated three objectives that the format integration process might achieve:

1. Extension of the USMARC bibliographic format to adequately accommodate for the first time non-textual serial items as well as "multitype material" (material with characteristics of more than one medium or format).

2. Simplification of the USMARC bibliographic format such that it would more closely resemble a unified "data dictionary" rather than a set of diverse formats with validation characteristics relating to specific library cataloging practices.

3. Reduction of the number of instances in which essentially the same data element can be coded in different ways in USMARC, either as a result of divergent practice among formats or for other "historical" reasons.

This discussion paper was reviewed at the summer 1987 USMARC advisory group meeting and those present at the meeting recommended that proposals be prepared to revise the USMARC bibliographic format along the lines presented in the paper.

In late summer of 1987, Proposal 88-1 (Format Integration) was written based on Discussion Paper 16. The proposal called for the integration of the USMARC bibliographic format for all types of materials--books, serials, visual materials, archival and manuscripts control, maps, music, and computer files. The proposal basically consisted of 40 specific proposals, most of which involved deletion of content designators that had never been fully defined or making obsolete of content designators that were no longer useful, and a general proposal to define all remaining data elements for all forms of material. One specific proposal dealt with accommodating non-textual serials (e.g., printed music serials) as well as newer forms of materials evidencing characteristics of more than one medium (e.g., a map in the form of a puzzle). Proposal 88-1 was considered at the January 1988 USMARC advisory group meetings and again at the July 1988 meetings. The general proposal was approved with various amendments, and 32 of the 40 specific proposals were approved. The proposal was subsequently approved by the Library of Congress. Part II and the appendixes of this document summarize the result of the approval of Proposal 88-1.

General Model

Because of special circumstances regarding USMARC variable control fields, special attention was focused on that area during the format integration discussions. A new field 006, Fixed-Length Data Elements--Additional Material Characteristics, was created to solve the problem of non-repeatability of field 008, Fixed-Length Data Elements. A general model was adopted to clarify how the new 006 and existing 008 fields would coexist in a record, especially in relation to the Leader 06 and 07 character positions.

Form of Material Designations in USMARC

The USMARC format is concerned with form of material on several levels. The first level consists of the seven general categories of material that have traditionally been considered different formats:

Form of Material: Level I
- Books
- Serials
- Visual Materials
- Archival and Manuscripts Control
- Maps
- Music
- Computer Files

The 008 field is defined differently for each of these Level I forms. The 008 field does not carry within it identification of the definition being used, but is instead dependent on the USMARC Leader 06 (Type of Record) and, in the case of textual material, Leader 07 (Bibliographic Level), for identification. The Leader 06 and 07 determine the definition of the 008 field as follows:

Form of Material: Level II (Leader 06)	Form of Material: Level I (008 Field)
Language material (and any bibliographic level except serial)	Books
Language material (and serial bibliographic level)	Serials
Projected medium	Visual Materials
Kit	Visual Materials
Two-dimensional nonprojectable graphic	Visual Materials
Three-dimensional artifact or naturally occuring object	Visual Materials
Archival and manuscripts control	Archival Control
Printed music	Music
Manuscript music	Music
Nonmusical sound recording	Music
Musical sound recording	Music
Printed map	Maps
Manuscript map	Maps
Computer file	Computer File

Since the 008 is not repeatable and is dependent on the Leader 06 and 07 for its definition, only one 008 can be included in a record. Information concerning additional aspects of an item can not be coded using 008.

With format integration, the type of 008 field is still defined by the Leader 06 and 07, but the part of the 008 field (character positions 18-34) that varies for different forms of material may be supplied for additional characteristics in a newly defined 006 field. There are thus seven possible different definitions of the 006 field, one for each type of 008 field. Since the type of 006 field is identified in the first character position of the field, as many 006 fields may be included in a record as are need to give information about a non-textual serial or multitype item.

It should be noted that a third level of form of material is also found in the USMARC record in field 007, Physical Description Fixed Field. In this field the following forms are identified:

Form of Material: Level III

Map
Globe
Projected graphic
Microform
Nonprojected graphic
Motion picture
Sound recording
Video recording

These forms are identified as ones for which special physical features need to be recorded. The 007 field is differently defined for each of these Level III forms but the field uses the first character position to identify the type of 007. Before format integration, each type of 007 field could be used only with specified (Level I) formats. After format integration all types of 007 fields may be used with all Level I forms, if needed.

Model

Beginning with the implementation of format integration, the following model is to be used to determine data to be included in a record:

If an item is basically textual:

Leader/06 - code for language material or archival and manuscripts control
Leader/07 - code for monograph, serial, collection, etc.
008 - book or serial (depending on Leader 06/07 codes) or archival control
006 - music, map, visual material, computer file, serial (as needed)
Variable fields - any applicable to the form or control of the item

If an item is not textual:

Leader/06 - code for printed music, manuscript music, printed map, manuscript map, projected medium, two-dimensional nonprojectable graphic, nonmusical sound recording, musical sound recording, computer file, kit, or three-dimensional artifact or naturally occurring object.
Leader/07 - code for monograph, serial, collection, etc.
008 - music, map, visual material, or computer file
006 - serial, archival control, music, map, visual material, computer file (as needed)
Variable fields - any applicable to the form or control of the item

During 1989, the designation of Archival and Manuscripts Control will be studied to assure that archival control aspects of non-textual items can be clearly indicated.

Format Changes Resulting from Integration

The basic change with format integration is the extension of the validity of all data elements to all forms of material. The special circumstance of the non-extendability of different definitions of the 008 field was overcome by the creation of a 006 field as described above. Certain other problems also had to be considered and as a result a few content designators were deleted and added and a larger number were made obsolete. Content designators that were deleted will no longer be documented in USMARC and should never appear in a record, new or old. Those that were made obsolete will continue to be documented in *USMARC Format for Bibliographic Data* but should not be used on new records. They may be found in older records, however. (Appendixes A, B, and C summarize the deletes, obsoletes, and additions to the format.)

Deletes

Several content designators had been reserved for a number of years but not fully defined. Rather than extending the reserved tag or subfield to all forms of material, these content designators were deleted from the format. Fields 330 is an example of a deleted field.

Unused Content Designation

A number of content designators had been defined but were not used, seldom used, or not used under current (post 1980) cataloging conventions. Rather than defining these for additional forms of material, most of them were made obsolete. An example is field 490, subfield n.

Criteria for Specialized Note Fields

Many specialized note fields, applicable to only one form of material, have been defined in USMARC. In order to help identify unnecessary note fields that should be made obsolete rather than being defined for all forms of material, criteria for establishing special note fields were developed. A specific 5XX note field is needed when at least one of the following is true:

1. Categorical indexing or retrieval is required on the data defined for the note. The note is used for structured access purposes but does not have the nature of a controlled 6XX-8XX access point.
2. Special manipulation of that specific category of data is a routine requirement. Such manipulation includes special print/display formatting or selection/suppression from display or printed product.
3. Specialized structuring of information for reasons other than those given in 1. or 2. above.

Several note fields were made obsolete because they did not meet these criteria. An example is field 527.

Unclear Definition of Content Designators

In a few cases the application of content designators had never been clearly defined and the practices of users thus varied. Several of these ambiguous values were made obsolete.

Brief Record Provisions

Several content designators, such as the first indicator in the 260 field, had been established primarily to assist in creating brief records. Since they are not used for that or other purposes, continuing to code them and validating them for other forms of material seemed inappropriate, thus they were made obsolete.

Overlapping Field Content

In several instances, the same type of data was present in different fields for different forms of material. This meant that with format integration, the same data could be placed in more than one field. These situations were reconciled and one place established for the data in each case. Thus acquisitions data is to be brought together in the 037 field and fields 265 and 350 were made obsolete. For titles, variant titles for the item being described in the record are to be contained in the 246 field for all forms of material. They were formerly carried in the 740 field for all forms except serials. The 740 field is being narrowed to carry only titles of material contained within the item being described and titles of other related items.

Name Changes

The name of a content designator was not clear, in some cases, when it became valid for additional forms of material, e.g., field 516, Type of File or Data Note, when defined for material other than computer files. Such names were adjusted to clarify the appropriate data content.

PART II: INTEGRATED FORMAT

Introduction

This part shows the USMARC bibliographic format with the format integration changes applied. Each change other than the addition of validation for more forms of material is annotated to indicate briefly the reason for the change.

Each page contains a listing of the content designators valid in the USMARC bibliographic format as published in the *USMARC Format for Bibliographic Data* (1988), updated to reflect additions or changes resulting from the July 1988 USMARC advisory group meeting. In the case of field 006 (Fixed-Length Data Elements--Additional Material Characteristics), field 007 (Physical Description Fixed Field) and field 008 (Fixed-Length Data Elements), the individual values under the character position-defined data elements are not usually listed. It should be understood that all values may be used for each form of material for which the data element is defined. In a few cases the values are listed for clarity in specifying a change. In addition, the following conventions have been used:

- Deleted content designators:

  Content designators that were deleted as a result of format integration have the word "*[DELETE]*" following their name and a brief explanation is given. The type of material for which the content designator was valid is crossed out. A deleted content designator will be removed from USMARC format documentation and that the element will not appear in any USMARC records. (A complete list of the deleted elements can be found in Appendix A.)

- Obsolete content designators:

  Content designators that were made obsolete as a result of format integration have the word "*[OBSOLETE]*" following their name and a brief explanation is given. The type of material for which the content designator was valid is crossed out. An obsolete content designator will continue to appear in USMARC bibliographic format documentation. The documentation will state that the element should no longer be used in records (new or retrospective) being input. The element will appear, if used, in older records already input. (A complete list of the obsolete elements can be found in Appendix B.)

- New content designators:

  New content designators resulting from format integration are highlighted by gray background. (Appendix C contains a listing of additions to the bibliographic format.)

- Name changes:

  Changes in the names of content designators resulting from format integration are shown by having words no longer used crossed out and new words highlighted by gray background. (A complete list of changes of names of content designators can be found in Appendix D.)

- New type-of-material validity for content designators:

  Opposite each content designator are six abbreviations representing the following kinds of material:

  BK/SE - Textual material
      BK - Books
      SE - Serials
  VM - Visual materials
  AM - Archival and manuscripts control
  MP - Maps
  MU - Music
  CF - Computer files

  If a content designator is new for a particular type of material then the abbreviation is highlighted by a gray background.

- Other conventions used:

  When an element is "Undefined," the element position contains a blank. The notation "b̸" is used to show the value "blank."

Variable Control Fields (00X)

001 CONTROL NUMBER BK/SE VM AM MP MU CF

002 SUBRECORD MAP OF DIRECTORY *[DELETE]* ~~BK/SE~~ ~~AM MP MU~~
This field was deleted for books, serials, archival and manuscripts control, maps, and music because the field was never defined and there was no known reason to continue reserving it.

003 SUBRECORD RELATIONSHIP *[DELETE]* ~~MP~~
This field was deleted for maps because the field was never defined and there appeared to be no need to continue reserving it.

004 RELATED RECORD DIRECTORY *[DELETE]* ~~SE~~
This field was deleted for serials because the field was never defined and there appeared to be no need to continue reserving it. Other fields are already defined to handle related record relationships, e.g., fields 762 (Subseries Entry) and 773 (Host Item Entry).

005 DATE AND TIME OF LATEST TRANSACTION BK/SE VM AM MP MU CF

006 ~~LINKING FIELD~~ FIXED-LENGTH DATA ELEMENTS-- ADDITIONAL MATERIAL CHARACTERISTICS BK/SE VM AM MP MU CF

For the 006 fields, the values for each data element are not listed, except for 006/00, Type of 006 code. All values for the corresponding data elements in the 008 fields (character positions 18-34) are defined for the corresponding 006 fields. All values are valid for all forms of material in the 008 field: BK/SE, VM, AM, MP, MU, and CF.

210 ABBREVIATED KEY TITLE	BK/SE VM AM MP MU CF
Ind.1 - Title added entry	BK/SE VM AM MP MU CF
0 - No title added entry	BK/SE VM AM MP MU CF
1 - Title added entry	BK/SE VM AM MP MU CF
Ind.2 - Undefined	BK/SE VM AM MP MU CF

ǂa	Abbreviated key title	BK/SE VM AM MP MU CF
ǂb	Qualifying information	BK/SE VM AM MP MU CF
ǂ6	Linkage	BK/SE VM AM MP MU CF

211 ACRONYM OR SHORTENED TITLE *[OBSOLETE]* ~~CF~~

This computer files field was made obsolete because the field was not being used and field 246 (Varying Form of Title) will handle all variant titles associated with an item, whether such titles are or are not on the piece.

212 VARIANT ACCESS TITLE *[OBSOLETE]* ~~SE~~

This serials field was made obsolete because the field was not being used and field 246 (Varying Form of Title) will handle all variant titles associated with an item, whether such titles are or are not on the piece.

214 AUGMENTED TITLE *[OBSOLETE]* ~~BK~~ ~~CF~~

This field for books and computer files was made obsolete because the field was not being used and field 246 (Varying Form of Title) will handle all variant titles associated with an item, whether such titles are or are not on the piece.

222 KEY TITLE BK/SE VM AM MP MU CF

Ind.1 - Specifies whether variant title and/or added entry is required *[OBSOLETE]* ~~SE~~ ~~CF~~
- 0 - No key title added entry; title proper same *[OBSOLETE]* ~~SE~~ ~~CF~~
- 1 - Key title added entry; title proper different *[OBSOLETE]* ~~SE~~ ~~CF~~
- 2 - Key title added entry; title proper same *[OBSOLETE]* ~~SE~~ ~~CF~~
- 3 - No key title added entry; title proper different *[OBSOLETE]* ~~SE~~ ~~CF~~

The first indicator for serials and computer files was made obsolete because institutions are using only value "0". With current cataloging conventions, institutions no longer make added entries for key titles.

Ind.1 - Undefined BK/SE VM AM MP MU CF

Ind.2 - Nonfiling characters BK/SE VM AM MP MU CF
- 0-9 - Number of nonfiling characters present BK/SE VM AM MP MU CF

ǂa Key title BK/SE VM AM MP MU CF
ǂb Qualifying information BK/SE VM AM MP MU CF
ǂ6 Linkage BK/SE VM AM MP MU CF

240 UNIFORM TITLE BK/SE VM AM MP MU CF

Ind.1 - Uniform title printed ~~on card/added entry~~ or displayed BK/SE VM AM MP MU CF
- 0 - Not printed ~~on card, no title added entry~~ or displayed BK/SE VM AM MP MU CF
- 1 - Printed ~~on card, no title added entry~~ or displayed BK/SE VM AM MP MU CF
- 2 - Not printed on card, title added entry *[OBSOLETE]* ~~MU~~
- 3 - Printed on card, title added entry *[OBSOLETE]* ~~MU~~

First indicator values "2" and "3" for music were made obsolete because institutions were not making added entries for uniform titles since the cataloging rules do not support the practice. If an added entry is desired for the uniform title, that added entry could be made using field 246 (Varying Form of Title).

Ind.2 - Nonfiling characters BK/SE VM AM MP MU CF

246 VARYING FORM OF TITLE BK/SE VM AM MP MU CF

Field 246 is to be used for titles for the item being cataloged other than those specifically provided for in 210-245 fields. For books, visual materials, archival and manuscripts control, maps, music, and computer files, these titles formerly were carried in the 740 field which is now to be limited to related item titles and analytical titles. Content designators were added to improve the generation of notes from the field content.

Ind.1 - Note controller/title added entry	BK/SE VM AM MP MU CF
0 - Note, no title added entry	BK/SE VM AM MP MU CF
1 - Note, title added entry	BK/SE VM AM MP MU CF
2 - No note, no title added entry	BK/SE VM AM MP MU CF
3 - No note, title added entry	BK/SE VM AM MP MU CF
Ind.2 - Type of title	BK/SE VM AM MP MU CF
ƀ - No information provided	BK/SE VM AM MP MU CF
0 - ~~Access to~~ Portion of title or additional title access	BK/SE VM AM MP MU CF
1 - Parallel title	BK/SE VM AM MP MU CF
2 - Distinctive title	BK/SE VM AM MP MU CF
3 - Other title	BK/SE VM AM MP MU CF
4 - Cover title	BK/SE VM AM MP MU CF
5 - Added title page title	BK/SE VM AM MP MU CF

260 PUBLICATION, DISTRIBUTION, ETC. (IMPRINT)	BK/SE VM AM MP MU CF
Ind.1 - Presence of publisher in imprint *[OBSOLETE]*	~~BK/SE~~ ~~MP~~ ~~MU~~
0 - Publisher, distributor, etc. is present *[OBSOLETE]*	~~BK/SE~~ ~~MP~~ ~~MU~~
1 - Publisher, distributor, etc. not present *[OBSOLETE]*	~~BK/SE~~ ~~MP~~ ~~MU~~

The first indicator for books, serials, maps, and music was made obsolete because it was considered unnecessary, especially since with recent cataloging rules, publisher information is always given in some form in subfield ǂb of the field. Publisher presence may be ascertained by the presence/absence of subfield ǂb.

Ind.1 - Undefined	BK/SE VM AM MP MU CF

260 PUBLICATION, DISTRIBUTION, ETC. (IMPRINT) (Cont.)

Ind.2 - Added entry/publisher relationship *[OBSOLETE]*		~~SE~~
0 - Publisher, distributor, etc. not the same as issuing body in added entry *[OBSOLETE]*		~~SE~~
1 - Publisher, distributor, etc. same as issuing body in added entry *[OBSOLETE]*		~~SE~~

The second indicator for serials was made obsolete because institutions were not using it to manipulate data in order to print brief records (the intended use of this indicator).

Ind.2 - Undefined		BK/SE VM AM MP MU CF

APPENDIX A: CONTENT DESIGNATORS TO BE DELETED

The following lists the fields or subfields that were deleted from the format as a result of format integration. A deleted content designator will be totally removed from the USMARC format documentation. The content designators should not appear in any USMARC records.

These deletes will be made with the publication of *Update Number 1* (Winter 1988/89) to the *USMARC Format for Bibliographic Data* (1988). All other changes due to format integration will be published in *Update Number 2* (Summer 1989).

The fields listed below had never been fully defined, only the tag value had been reserved. The two subfields had not been used and were not needed in the future.

Deleted fields:
002 Subrecord Map of Directory (BK/SE AM MP MU)
003 Subrecord Relationship (MP)
004 Related Record Directory (SE)
320 Current Frequency Control Information (SE)
330 Publication Pattern (SE)
331 Former Publication Pattern (SE)

490 Series Statement
Deleted subfield:
ǂn National Library of Canada call number (SE)

500 General Note
Deleted subfield:
ǂn National Library of Canada call number (SE)

APPENDIX B: CONTENT DESIGNATORS TO BE MADE OBSOLETE

The following lists the content designators that were made obsolete as a result of format integration. These will continue to be briefly described in history sections of the USMARC bibliographic format documentation, but they should no longer be used in new or new retrospective records. They may appear, if used in older records created before the content designators were made obsolete.

These content designators will be made obsolete in USMARC in *Update Number 2* (Summer 1989) to the *USMARC Format for Bibliographic Data* (1988).

008/06 Type of date/publication status)
  Obsolete codes:
  d Detailed date (BK VM)
  c Actual date and copyright date (BK VM MP MU CF)

Obsolete character positions:
008/30 Title page availability (SE)
008/31 Index availability (SE)
008/32 Cumulative index availability (SE)
008/32 Main entry in body of entry (BK VM MU)

041 Language Code
  Obsolete indicator:
  Ind.1 - Undefined (VM AM MP)

100-130 Main Entry Fields
  Obsolete indicator:
  Ind.2 - Main entry/subject relationship (BK/SE MU)

Obsolete fields:
211 Acronym or Shortened Title (CF)
212 Variant Access Title (SE)
214 Augmented Title (BK CF)

222 Key Title
  Obsolete indicator:
  Ind.1 - Specifies whether variant title and/or added entry is required (SE CF)

240 Uniform Title
  Ind.1 - Uniform title printed or displayed
  Obsolete values:
    2 Not printed on card, title added entry (MU)
    3 Printed on card, title added entry (MU)

243 Collective Uniform Title
Ind.1 - Uniform title printed or displayed
Obsolete values:
  2 Not printed on card, title added entry (MU)
  3 Printed on card, title added entry (MU)

260 Publication, Distribution, Etc. (Imprint)
Obsolete indicators:
Ind.1 - Presence of publisher in imprint (BK/SE MP MU)
Ind.2 - Added entry/publisher relationship (SE)

Obsolete fields:
265 Source for Acquisition/Subscription Address (BK/SE VM MP MU CF)
302 Page Count (BK)
305 Physical Description for Sound Recordings (Pre-AACR 2) (MU)
308 Physical Description for Films (Archival) (VM)
315 Frequency (MP CF)
350 Price (SE CF)

500 General Note
Obsolete subfields:
ǂl Library of Congress call number (SE)
ǂx International Standard Serial Number (SE)
ǂz Source of note information (SE AM)

Obsolete field:
503 Bibliographic History Note (BK MU CF)

511 Participant or Performer Note
Ind.1 - Display constant controller
Obsolete values:
  2 Presenter (VM MU)
  3 Narrator (VM MU)

Obsolete field:
512 Earlier or Later Volumes Separately Cataloged Note (SE)

515 Numbering Peculiarities Note
Obsolete subfield:
ǂz Source of note information (SE)

520 Summary, Etc. Note
Obsolete subfield:
ǂz Source of note information (BK/SE AM CF)

Obsolete field:
523 Time Period of Content Note (CF)

525 **Supplement Note**
Obsolete subfield:
ǂz Source of note information (SE)

Obsolete field:
527 Censorship Note (Archival) (VM)

530 Additional Physical Form Available Note
Obsolete subfield:
ǂz Source of note information (SE VM AM CF)

Obsolete field:
537 Source of Data Note (CF)

546 Language Note
Obsolete subfield:
ǂz Source of note information (SE)

547 Former Title Complexity Note
Obsolete subfield:
ǂz Source of note information (SE)

550 Issuing Body Note
Obsolete indicator:
Ind.1 - Existence of additional information (SE)
Obsolete subfield:
ǂz Source of note information (SE)

Obsolete field:
570 Editor Note (SE)

580 Linking Entry Complexity Note
Obsolete subfield:
ǂz Source of note information (BK/SE VM AM MP MU CF)

Obsolete field:
582 Related Computer Files Note (CF)

700-730 Added Entry Fields
Ind.2 - Type of added entry
Obsolete values:
0 Alternative entry (BK/SE AM MP MU CF)
1 Secondary entry (BK/SE AM MP MU CF)
1 Printed on card (VM)
3 Not printed on card (VM)

740 Added Entry--Uncontrolled Related/Analytical Title
Ind.2 - Type of added entry
Obsolete values:
0 Alternative entry (BK/SE AM MP MU CF)
1 Secondary entry (BK/SE AM MP MU CF)
1 Printed on card (VM)
3 Not printed on card (VM)

760 Main Series Entry
762 Subseries Entry
777 Issued With Entry
Obsolete subfield:
ǂq Parallel title (SE)

765 Original Language Entry
767 Translation Entry
770 Supplement/Special Issue Entry
772 Parent Record Entry
775 Other Edition Entry
776 Additional Physical Form Entry
780 Preceding Entry
785 Succeeding Entry
787 Nonspecific Relationship Entry
Obsolete subfield:
ǂq Parallel title (BK/SE)

APPENDIX C: ADDITIONS TO CONTENT DESIGNATORS

The following lists additions to content designation as a result of format integration. It does not include validation of existing content designators for additional forms of material. It also does not include name changes, which are separately listed in Appendix D. In some cases, the content designators being newly defined result from making other elements obsolete.

These changes will be made to USMARC in *Update Number 2* (Summer 1989) to the *USMARC Format for Bibliographic Data* (1988).

006 Linking Field
Redefined to "Fixed-Length Data Elements--Additional Material Characteristics" with defined values. (Note that the tag was formerly only reserved for SE.)

008/06 Type of date/publication status
Defined code "e" (Detailed date) for BK, VM, and AM.
Defined code "t" (Publication date and copyright date) for BK, VM, MP, MU, and CF.

008/32 Undefined (BK MU VM)
Defined value "ƀ" (Undefined).

008/32 Undefined (SE)
Defined value "ƀ" (Undefined).

100-130 Main Entry fields
Defined Ind.2 value "ƀ" (Undefined).

222 Key Title
Defined Ind.1 value "ƀ" (Undefined)

246 Varying Form of Title
Defined Ind.1 values "2" (No note, no title added entry) and "3" (No note, title added entry).
Defined Ind.2 value "ƀ" (No information provided)
Defined subfield ‡i (Display text).
Defined subfield ‡5 (Institution to which field applies).

260 Publication, Distribution, Etc. (Imprint)
Defined Ind.1 value "ƀ" (Undefined).
Defined Ind.2 value "ƀ" (Undefined).

550 Issuing Body Note
Defined Ind.1 value "ƀ" (Undefined).

Defined subfield ǂ5 (Institution to which field applies) in the following fields:

501	With Note
506	Restrictions on Access Note
540	Terms Governing Use and Reproduction Note
541	Immediate Source of Acquisition Note
561	Provenance Note
562	Copy and Version Identification Note
584	Accumulation and Frequency of Use Note
585	Exhibitions Note

700-730 Added Entry fields
Defined Ind.2 value "ƀ" (No information provided).

740 Added Entry--Uncontrolled Related/Analytical Title
Defined Ind.2 value "ƀ" (No information provided)

APPENDIX D: CHANGES OF NAMES OF CONTENT DESIGNATORS

The following list indicates the changes to names of content designators that resulted from format integration. Many of the changes reflect the necessity to make the name and use of a field clearer when it becomes available for use with different forms of material.

These changes will be made to USMARC in *Update Number 2* (Summer 1989) to the *USMARC Format for Bibliographic Data* (1988).

008/06 Type of date/publication status (All formats)
Changed the name of the serial code "c" from "Currently published status" to "Serial item currently published."
Changed the name of the serial code "d" from "Dead status" to "Serial item ceased publication."
Changed the name of code "u" from "Unknown status" to "Serial item status unknown."

008/07-10 Date 1/beginning date of publication (All formats)
Changed the name of the element to "Date 1."

008/11-14 Date 2/ending date of publication (All formats)
Changed the name of the element to "Date 2."

008/30 Undefined (previously defined as "Title page availability") (SE)
Changed the name of code "ƀ" from "No separate title page issued" to "Undefined."

008/31 Undefined (previously defined as "Index availability") (SE)
Changed the name of code "ƀ" from "No index published" to "Undefined."

034 Coded Mathematical Data
Changed the name of the field to "Coded Cartographic Mathematical Data."

036 Original Study Number
Changed the name of the field to "Original Study Number for Computer Data Files."

037 Stock Number
Changed the name of the field from "Stock Number" to "Source of Acquisition."
Changed the name of subfield ‡b from "Source (agency assigning number)" to "Source of stock number/acquistion."

044 Country of Producer Code
Changed the name of the field and subfield ‡a to "Country of Publishing/Producing Entity Code."

047 Form of Composition
Changed the name of the field and subfield ‡a to "Form of Musical Composition Code."

048 Number of Instruments or Voices Code
Changed the name of the field to "Number of Musical Instruments or Voices Code."

210 Abbreviated Title
Changed the name of the field and subfield ǂa to "Abbreviated Key Title."

240 Uniform Title
243 Collective Uniform Title
Changed the name of the 1st ind. from "Uniform title printed on card/added entry" to "Uniform title printed or displayed."
Changed the name of 1st ind. value "0" from "Not printed on card, no title added entry" to "Not printed or displayed."
Changed the name of 1st ind. value "1" from "Printed on card, no title added entry" to "Printed or displayed."

246 Varying Form of Title
Changed the name of the 1st ind. from "Title added entry" to "Note controller/title added entry."
Changed the name of 1st ind. value "0" from "No title added entry" to "Note, no title added entry."
Changed the name of 1st ind. value "1" from "Title added entry" to "Note, title added entry."
Changed the name of 2d ind. value 0 from "Access to portion of title" to "Portion of title or additional title access."

254 Musical Presentation Area
Changed the name of the field and subfield ǂa to "Musical Presentation Statement."

255 Mathematical Data Area
Changed the name of the field to "Cartographic Mathematical Data."

256 File Characterisitics
Changed the name of the field and subfield ǂa to "Computer File Characteristics."

257 Country of Producing Entity
Changed the name of the field and subfield ǂa to "Country of Producing Entity for Archival Films."

306 Duration
Changed the name of the field and subfield ǂa to "Playing Time."

310 Current Frequency
Changed the name of the field and subfield ǂa to "Current Publication Frequency."
Changed the name of subfield ǂb from "Date of current frequency" to "Date of current publication frequency."

321 Former Frequency
Changed the name of the field and subfield ǂa to "Former Publication Frequency."
Changed the name of subfield ǂb from "Dates of former frequency" to "Dates of former publication frequency."

340 Medium
Changed the name of the field to "Physical Medium."

best copy available

351 Organization and Arrangement
Changed the name of the field to "Organization and Arrangement of Materials."

504 Bibliography Note
Changed the name of the field and subfield ǂa to "Bibliography, Etc. Note."

507 Scale Note
Changed the name of the field to "Scale Note for Graphic Material."

508 Credits Note
Changed the name of the field and subfield ǂa to "Creation/Production Credits Note."

516 Type of File or Data Note
Changed the name of the field and subfield ǂa to "Type of Computer File or Data Note."

520 Summary, Abstract, Annotation, Scope, Etc. Note
Changed the name of the field and subfield ǂa to "Summary, Etc. Note."

538 Technical Details Note
Changed the name of the field and subfield ǂa to "System Details Note."

544 Location of Associated Materials Note
Changed the name of the field to "Location of Associated Archival Materials Note."

581 Publications Note
Changed the name of the field and subfield ǂa to "Publications About Described Materials Note."

740 Added Entry--Variant Title
Changed the name of the field to "Added Entry--Uncontrolled Related/Analytical Title."
Changed the name of subfield ǂa from "Title" to "Uncontrolled related/analytical title."

753 Technical Details Access to Computer Files
Changed the name of the field to "System Details Access to Computer Files."

THE LIBRARY OF CONGRESS
